

HOSPITAL ABBREVIATIONS AND ITEMS IN SUPPORT OF REGIONAL UNIDENTIFIED PATIENT NAMING CONVENTION

This tool provides a regional naming convention and associated protocols for identifying, tracking, and caring for unidentified patients during a mass casualty incident (MCI) response. The table below contains naming convention guidance, including for first and last names and estimated age. There is also information for incorporation of identifying features into the patient record, and a tag to associate victims of the same incident. In addition, the guidance offers a target time period for patient registration.

PATIENT VARIABLE	NAMING CONVENTION
Last Name	<ul style="list-style-type: none"> • Abbreviation of hospital name + digit (beginning with "1") • Example for General Hospital: GenHosp1, GenHosp2, GenHosp3 • <i>Please see below for suggested hospital abbreviations for all GNYHA members</i>
First Name	<ul style="list-style-type: none"> • Each hospital has been assigned an item; <i>please see below for list of assigned items, plus 50 suggested names for that item</i>. Hospitals are encouraged to develop additional names within their assigned item type beyond those provided. • Example: Assigned Item = Flowers • Name list: Begonia, Daffodil, Lily, Rose, Lilac, Dahlia, etc.
Estimated Age	1/1/estimated year of birth (based on hospital staff observation)
Gender	Indicate "male," "female," or "unknown"

ADDITIONAL VARIABLES	NAMING CONVENTION
If the Patient is a Minor	Indicate in the medical record whether the patient arrived unaccompanied or was brought in by or with someone. If brought in by someone, capture the individual's contact information.
Identifying Physical Features	Ensure there is a place on registration documentation and within the electronic medical record (EMR) to capture information about tattoos, unusual features or markings, and their location, which could help with identification.
Accompanying Items	List any items that the person may have had with them upon arrival that could aid identification; if possible, take a photograph of these items and include it with the medical record. Include "in case of emergency" information obtained from the individual's cellphone.
Photo	Take a picture of each patient and upload it to the EMR, as time allows.

ADDITIONAL VARIABLES	NAMING CONVENTION
Disaster Tag	<ul style="list-style-type: none"> Associate all patients related to the incident, whether identified or unidentified, with an electronic disaster tag. Because the nature of the incident may not be known, a suggested convention for the disaster tag is: MCI_m/d/y_closest hour to the arrival of the first patient. <i>A government entity will later instruct hospitals to retroactively apply a different incident tag such as "Pulse Nightclub Incident."</i>
Reconciled Last Name, First Name	Ensure there is a place within the medical record to indicate the individual's first and last names once he/she is identified. Also, allow space for commonly used nicknames. Both the medical record and identification bracelet should be updated as soon as the patient is identified, with both names visible. This is necessary to ensure labs, radiography, and other clinical care elements associated either with the assigned name or reconciled name are available under a single patient record.

TARGET TIME PERIOD FOR ELECTRONIC REGISTRATION	
Within 20 Minutes	While patient care takes precedent, hospitals should develop and exercise disaster registration protocols so that patients, including unidentified patients, can be quickly registered. Registering patients within this timeframe directly supports broader patient tracking and family reunification efforts.

Suggested first and last names for all GNYHA member hospitals are below.
